Based on the success of AutoCAD, Autodesk created AutoCAD LT, a version of AutoCAD designed for smaller businesses and consumers. AutoCAD LT is a Microsoft Windows-only version of AutoCAD, as opposed to the Mac OS X and Linux versions of AutoCAD. AutoCAD is divided into two components: the AutoCAD operating system and the AutoCAD application. The AutoCAD operating system is a comprehensive engineering and drafting package with dozens of design tools including the drawing tools, BIM tools, drafting and project management tools, and more. The AutoCAD application features a user interface (UI) optimized for drafting and designing. AutoCAD is a free and open source project managed and developed at GitHub. The source code is available for review and modification. There are numerous third-party resources including Autodesk University, forums, videos, online courses, training materials, and more. The following types of AutoCAD projects are offered in the marketplace. Most of the projects are designed for business use. The free versions, though, are often ideal for personal use. AutoCAD LT is a Microsoft Windows-only version of AutoCAD. The only hardware requirements are that the computer has 64 MB of RAM, a CD-ROM drive, a display with at least a 1024×768 resolution, and a broadband internet connection. Graphical user interface (GUI) and command line Visual LISP allows users to automate drawing commands through functions that can be mapped directly to drawing commands. The VBA variant of Visual LISP was developed for the Microsoft Office Application Programming Interface (API) and is compatible with Visual Studio. It can be used for scripting drawing commands or for customizing the GUI. The AutoCAD Visual LISP (VLS) can work in a similar fashion to LISP as it is an interpreted language that is capable of processing the coordinates that are received from the user interface in a uniform manner. Visual LISP was enhanced with the development of the AutoLISP language. This enhanced version of Visual LISP is the more commonly used. AutoLISP is interpreted and based on logic rather than a statement based programming language, and its unique nature has made it popular among users for complex applications. The traditional version of the AutoLISP interpreter was written in Delphi (now Embarcadero RAD Studio) and requires a bytecode compiler. The modern interpreter is written in C++ and uses the standard Microsoft compilers. Another well known scripting language in AutoCAD is ObjectARX. ObjectARX is a C++ class library, which was also the base for the AutoCAD Architecture, AutoCAD Electrical, AutoCAD Civil 3D third-party AutoCAD-based application products. AutoCAD is now object-oriented and has a common framework for all these products to share features. All these applications can be scripted using ObjectARX or Visual LISP. Programming languages AutoCAD is capable of using many programming languages. Most of the programming languages are covered in the AutoCAD user's manual. In the past, CADsoft was written in assembly language. When CADsoft 8.0 was released, it was also compiled in assembly language. Later, when AutoCAD 98 was released, the programming languages CADsoft was written in were Visual Basic, Visual LISP, Visual C++, and AutoLISP. With the release of AutoCAD 2000, the programming language was changed to ObjectARX, which is a C++ class library that is the base for the AutoCAD Architecture, AutoCAD Electrical, AutoCAD Civil 3D third-party AutoCAD-based application products. AutoCAD now has a common framework for all these applications to share features. All a1d647c40b
