I thought about installing it using this source code of a magento installation like this: ... so i just extract the files and run on production magento installation but i got this error after installation: Fatal error: Allowed memory size of 33554432 bytes exhausted (tried to allocate 269503952 bytes) in /vendor/phpunit/php-code-coverage/src/CodeCoverage.php on line 318 i have 2 different imags on production server so i have a full image and i have a smaller image to run on production but the problem is i can't get it to run and i dont know how magento code works so i get this error. i have a bash script on my local computer that i can run and that is perfectly working but i need to know how i can get a magento installation from command line and i need this installation to be not from tar because that one only extract the files and i need it to be installed like magento installation with php composer command. Im running 3e33713323
