A network share is the most efficient way to access data and files in AutoCAD. If the local hard drive of AutoCAD is full of data, you can extend it using the shared network disk of AutoCAD. AutoCAD can synchronize its information with other software such as: AutoCAD Arch and AutoCAD Electrical use a distributed lock to synchronize the drawing database. AutoCAD Civil 3D uses the same protocol. Other software packages use their own protocol. System requirements Hardware requirements AutoCAD can run on Windows 7, Windows 8, Windows 8.1, Windows 10 or Windows Server 2016 and is optimized for high end desktop computers, laptop computers and personal computers. Windows Server can run AutoCAD with a small footprint, making it a good candidate for small, rack-mounted systems. AutoCAD can be installed and run on various hardware platforms. Setup your Autocad platform. Open the Autocad App. When launching Autocad, you'll see the notification. Click Open. Click Choose File. Open the Autocad.exe from the Autocad folder on your computer. Press Enter. Run the Autocad.exe. Select File > Options. Under the Load and save toolbar click on the button Get A Key. Check Generate a Key when launching Autocad. Click on OK. Source : How to generate Keys on a Mac using Keychain Access Q: Javascript API or Library for Mapping of People (with multiple Identities) Is there any api or library for mapping Person (with multiple identities) or multiple identifiers using javascript? I am getting some sample documents and would like to know how to map them to my table. I have tried to read the document but its not clear enough. I am working with MongoDB for mapping data. Any help is highly appreciated. Thanks, Dan. A: I am using mongoskin and it was providing all the parameters needed for mapping multiple user identities to user mongoose = require('mongoose'); /* Get User Model */ UserSchema = mongoose.Schema({ email: { type: String, required: true, index: true }, password: String, createdAt: Date, roles: [String] }); module.exports = mongoose.model('User', UserSchema); I used the above module for getting the multiple identities for the user. Q: How can I get the value of a custom field from the Custom List Entry form? My objective is to retrieve the value of a custom field (Picklist field) from the Custom List Entry form. The custom field is on a Custom List. I have enabled the custom fields in Settings > Customize > Custom List. The field was created using the Custom List Entry form, and a VF page. I have created a Lightning Component on the Custom List Entry, and a Lightning Component on the VF page. I can successfully display the value
