Eset NOD32 Antivirus License Key Free Full ESET NOD32 Antivirus 6Q: Problem with getting the data from the database this is my mysql query. It seems to be OK but it does not get the output as expected. Here is the query: $query = mysql_query("SELECT s_id FROM OSCOMMENTS WHERE s_id='".$get['s_id']."'"); while ($row= mysql_fetch_array($query)) { echo $row['s_id']; } A: In addition to other things @tigerstated already mentioned, I recommend that you use PDO instead of mysql_* functions in php. Here is why I think so: PDO is more secure than MySQLi / MySql It offers you lots of useful function e.g. error handling, transaction and prepared statement It is more reliable than MySQLi (I did not try mySql myself but I know you have mentioned it as unreliable here) You may need to study and prepare for PDO before you start using it. Search for PDO examples on this site. Gurbir Chahal To Appear On 'The Tonight Show' Gurpreet Singh Chahal, a cricketer who is the highest wicket taker in the IPL with 276 scalps, will make his debut appearance on Jimmy Fallon on June 25. The 36-year-old leg spinner will come face-to-face with the 'Jeopardy' host for the first time. Commenting on his appearance, Chahal said, "I am happy that I will be going on Jimmy's show. I feel that he is the biggest sports figure in the world." In his second season with the Indian Premier League (IPL), Chahal has taken a whopping 19 wickets from six matches. He also features in the ICC ODI Player Rankings and is currently top of the ICC ODI Team Rankings. Chahal revealed that his outfit Mumbai Indians have been very kind to him and the coach Steve Kettleborough had helped him a lot in understanding the nuances of the game.

But it seems there is no connection established between the server and the client, even I've edited this code to make connection already. Below is my code... My username and password is entered properly, so I can be authenticated. If the login is fail, it should display the message Username or Password is invalid. But it always displays the method "Location:api.php" is already in use. What should I do to fix it? A: Try this in the header section $con = mysqli_connect("localhost", "root", "", "user"); $username = $_GET['username']; $password = $_GET['password']; $qry = "SELECT id, userName, password FROM user WHERE userName = '$username d0c515b9f4
