1. Field of the Invention The present invention relates to a rotary tube type ink jet printer, and more particularly to an ink jet printer having a rotary printing drum driven by a rotational force from the drive motor. 2. Description of the Related Art An ink jet printer, which is a kind of non-impact printer, has been used as a type of computer output device since the 1980s. Since the 1980s, the ink jet printer has been miniaturized, and a printing speed has been improved. However, the ink jet printer uses ink which has a short life span, and it is difficult to manufacture the ink jet printer which is inexpensive. Further, it is not suitable for high-speed printing. In order to solve the above-mentioned problems, a rotary printing drum is connected to a drive shaft of a DC motor, an ink cartridge is mounted to the print drum, ink is fed to the print drum, and the drive shaft is rotated at a high speed, thereby causing the ink from the ink cartridge to be ejected. An example of a conventional rotary printing drum is disclosed in Japanese Patent Laid-Open No. Hei 4-137095. The conventional rotary printing drum has an elastic member such as a spring for biasing a roller connected to an ink cartridge. An inner surface of the elastic member is formed on an elastic body which receives ink supply pressure from the ink cartridge. The elastic body is provided so that the rotation of the roller can be prevented when the ink supply pressure is small or the roller is stopped. In the above-mentioned conventional example, however, the rotation of the roller must be stabilized while the roller is rotated by an insufficient ink supply pressure. Therefore, the elastic member must be well balanced to prevent the rotation of the roller.It's supposed to be the biggest sporting event in Australia but we've never heard of Rugby World Cup until now, but watching it on our television screen has never been more fun than now. Q: Liquor license challenge What might the owner of a bar have to do to meet the Texas liquor license requirements? For example, he has many regular patrons but is looking for a way to increase sales and thus increase his/her revenue. Does he have to buy a new license, or is there some other bar-related challenge that can be done which will help with the liquor license requirement(s)? A: A bartender needs a business license, but a bar itself needs a restaurant license. can be used to value r, because $I_u(t)$ is a decreasing function. We also have that $\tilde{\gamma}_\ell-\tilde{\gamma}_u \leq t_{d}$ since the value in the last iteration decreases when selecting x_r instead of x_s. Therefore, we can write $$\begin{aligned} \label{eq:deltaxesupp} \Delta x_\ell \leq \Delta x_s = \frac{1}{\tau} \left(\tilde{\gamma}_u-\tilde{\gamma}_\ell \right).\end{aligned}$$ From and we get $$\begin{aligned} \label{eq:Delta-gen-bound} \Delta x_\ell \leq \Delta x_s \leq \frac{1}{\tau} \left(d_u-d_\ell \right),\end{aligned}$$ where d_u and d_ℓ are the distances of the points $\tilde{x}_u$ and $\tilde{x}_\ell$ from the ideal point $\bar{x}$. ![Iteration-wise bound $I_u(t)$ in, for several values of t.[]{data-label="fig:I_u"}](I_u){width=".45\textwidth"} Figure \[fig:I_u\] shows $I_u(t)$ for several values of t
