Corel VideoStudio Pro X10 is a video production suite in the Corel suite of products, and was released in 1999. It was one of the early stand-alone products, and is based on the then-prevalent Microsoft Windows and Microsoft Office solutions. The software uses a simplified interface for video editing (using commands, the primary tool is the timeline window) and importing. Editing and exporting are done for a variety of formats. The product includes a Sony Playstation to copy an input video file to an editable MPEG-4 file. The output video file can be previewed and exported to share with other people. Other features are: Video edition: User can add different titles and adjustments to a video file. Picture management: User can add images, adjust and correct the color and tone of the images, rename images and so on. Voice recording: User can add or remove voice clips or annotations to a video file and make voice recordings. Video editing: Slice: Separate a video file into sections, which is useful for removing unwanted portions, such as clips, or viewing it via a thumbnails as a playlist. Transitions: Create various kinds of transitions for the video file. Sound mixing: Use sound effects and music to create soundtracks. Movie maker: Create a movie, which can be played on DVD, iPhone, etc. Videos are color corrected and optimized by Corel VideoStudio Pro X10. You can preview your color-corrected and optimized video before export. Editing tasks are performed via the timeline window. For example, a slow-motion clip can be added to an input video file by dragging it from the timeline window and dropping it onto the input video file. Corel VideoStudio Pro X10 supports several types of video files. It can import MPEG-4, AVI, MOV, DivX, XVID, Xilisoft video.
