Oscam Cccam Client Creator [BEST]

---

i am trying to get oscam 2.0.1.3 to work with a cisco aironet 350 dual band usb dongle. i have a ccccam server running on a windows 7 pc with the airochat server. i can connect to the server and when i run ccccam -t it lists all of the available channels. when i run ccccam -h or ccccam -i it lists the ccccam client. when i run ccccam -s it lists the channels that i have set on the airochat server. when i run ccccam -d it finds all of the channels and i am able to watch them. when i run ccccam -v it still lists the ccccam client but when i try to set the channels on the airochat server i get this message:cccam 2.3warning: could not set the channel.error: no data received from the server.warning: the session has been closed.ccccam 2.3warning: no data received from the server.i am using a windows 7 pc to run the oscam software and a cisco aironet 350 usb dongle to connect to the cisco airochat server. i have followed this guide [url=>all i need to know is how to replace the two files that are not in the directory and replace the two files in the directory. i have done this so far:replaced the config file in the oscam directory with the ones from the ccccam converter site. restarted oscam and now the oscam server is running. i have no idea what to do next. as i said above, i am not sure how to start the radio. i used this [url= guide to convert my ccccam. the result is a working oscam, but i can only scan 16m. i don't see the oscilloscope screen on my oscilloscope. any ideas on how i get this to work? i have used the latest version of oscam that i have downloaded from the site but i have been trying to use the 2.1.0-1 version and i cannot find a way to use that version of the software. i want to use my oscilloscope, so i can see if it is working but i am stuck at the radio head issue. i have the mc-611 and when i use the software it is saying that it does not see the radio head. can anyone help me with this issue?

## Oscam Cccam Client Creator

```
/bin/bash /home/myuser/network2/autorun.sh /home/myuser/network2/start.sh addw "mycline.domain" "mycline.ip"
"mycline.port" "myuser" "mypass" "mygroup" "myinactivitytimeout" "myreconnecttimeout" "mylb_weight" "mycccmxhops"
"myccckeepalive" "mycccwantemu" oscam cccam client creator i am confused so i have to change configs on the server and
on the client. i don't want this! i want everything to be automatic. [reader] label=mycline.ipenable=1protocol=cccamdevice=
myclinedomain,portuser=knownpassword=mypasscccversion=2.1.2group=1inactivitytimeout=1reconnecttimeout=30lb_weig
ht=100cccmxhops=10ccckeepalive=1cccwantemu=0caid = 0963ccc_autoflush = 1ccc_keep_pause = 0ccc_flow =
1ccc_expert_numeric = 1ccc_full_probe = 0ccc_full_demod = 1ccc_rx_tap = 1ccc_probe_first = 1mode=108 i am now in
panic! i do not know how to get rid of my cline and still have my mobile connected when i want it!! i have to have both of
them connected to the right port and ip to get them working both at the same time. yes, if your source is the dvb cam-chip,
you can use oscam without any minor changes to the source. note: there is no need to add any oscam module to tuxbox. use
only the oscam-client which will be found in the oscam-package to install it on your system. the oscam-client is a special
program which parses the oscam-conf file and collects the correct settings and information to build it's interface. hi, i have a
question. i have installed the oscam client on my toshiba netaplighter a-100 using the instructions given on the
http://www.cccam.info website, but it won't run with my dualvox jhub? is there something i've missed? thanks for your time.
