#### What's New In?

The Features in the application

1. Flexible Schedule - The user can create schedule alarms based on a date or a schedule.
2. Alarm Enablement - An alarm can be enabled or disabled.
3. Alarm Resolution - Based on the resolution or action chosen in the Alarm Enablement window, the alarm can be resolved.
4. Alarm Type - There are four different types of alarms (Equal, Greater Than, Less Than, or Between).
5. Tag Viewer - Tag Window is used for setting or editing tags on either groups or objects.
6. Tag Type - Tag Window can be opened to set or edit tags on either groups or objects.

The Component

1. Data Blocks - The main object in the application is a data block.
2. Alarm Entry - A data block can have an alarm entry associated with it.
3. Alarm Entry Type - Alarms and alarm entries in a data block can have an associated alarm type, which is equal, greater than, less than, or between.

The Database

1. This application uses a table with columns for a date (VON), an alarm type (Equal, Between, Greater Than, Less Than), the alarm expression (DB Expressions), alarm name (Alarm name), description (Alarm description), description of resolve type (Alarm resolution), and the alarm label (Alarm label) for the given date. The user enters the alarm and alarm label for the new entry. The application creates and displays the information to the user. The user selects an existing alarm entry and enters the date to see if the user has entered the expression to match the alarm. If the expression is correct, the user enters a label for the alarm. The user then sees the alarm with the correct label.

Alarm Entry Select an entry for the entry or group that you want to associate an alarm entry with Alarm Expression Enter the alarm expression for the entry or group that you are associating with a new alarm. Alarm Name Enter the name of the alarm Alarm Label Enter the label for the alarm Alarm Type Select the type of alarm for the entry or group that you are associating with a new alarm. Create an alarm entry You must associate a data block with the alarm entry. Click on the Data Block for the data block that you want to associate with the alarm entry. Click Alarms under Data Blocks to open the Alarms data block. Data Blocks You must associate a data block with the alarm entry. Click on the Data Block for the data block that you want to associate with the alarm entry. Click Alarms under Data Blocks to open the Alarms data block. At the bottom of the window that opens
