The new object selection in Photoshop is now more precise. You can access the new "Object Selection" bar by going to the Home tab, choosing Selection, and clicking the Object Selection button. The result is a bar with a 20-point measuring radius. The new One Click Fill tool offers a more precise way to fill an image. This feature lets you select areas of your image in as precise a way as you could with a paint program, and fire up the Fill tool which will correct the selected area to the closest matching color. You can set a spatial filter so that the area you select will be filled with the closest color in the interior of the active selection. You can also set a blending mode so that an interior object will be filled with the most appropriate color—outdoors: transparent, or inside: set to the color you want the object to be. Basic Layer Fill works in a similar way. You can choose between the color you want—outdoors: transparent or inside: set to the color you want—and add a Layer Mask to limit the area selected. You can also apply a Gradient Fill, set to a Predefined gradient, or a Pattern Fill. You can even tilt an image, using the Tilt tool, and select an area that will be filled with the most appropriate color. You can also apply the effect to an area in a different color. You can work with these new selections using powerful masking tools that let you mask out areas, or paint on the image as you would with a paint program. You can now save blend modes as presets. This lets you quickly apply a preferred blending mode each time you create a new blend. You can also easliy capture or remove blend modes. You can also play with the settings in the Color Match dialog.
