Large Text File Viewer Crack + Free [Mac/Win] Latest

Large Text File Viewer is an application designed to open large text documents with sizes that exceed 1GB. Although opening such a document usually needs a lot of time and hardware resources, Large Text File Viewer promises to do everything faster and without stressing up the computer too much. And truth is, it pretty much manages to do this, although the interface may disappoint some of the users. With a clean but a way too simple look, Large Text File Viewer shows the content of a text document, while performing file indexing in the background to make sure you can browse the content without any interruption. In addition, it provides an advanced search utility that works like a charm on larger documents, despite the fact that most applications usually need much more time to perform such a task. A settings menu is also available, allowing you to change the default font, style and size, but also the colors of the main window. For a bit more tweaking power, Large Text File Viewer also offers a dedicated feature to change the background image and thus make the interface more user friendly. With drag and drop also supported, Large Text File Viewer indeed runs blazing fast, without hampering system performance at all. It all goes very smooth on all Windows versions. Overall, Large Text File Viewer is clearly a handy tool that manages large documents in an unique way. Still, it needs some improvements, especially in the interface department, as users always prefer more appealing layouts with eye-candy elements.

3 Free Dictionary WordList Software
Dictionary WordList Software is a word definition organizer program for Windows. The program allows you to save up to 999 entries for any word. It includes spell checking, dictionary search, and a database index.

What's New In Large Text File Viewer?

Large Text File Viewer is a free, small, application that offers many advantages and even some surprises. It allows you to open large text documents and to search for them. Large Text File Viewer is designed to open documents of size that exceed 1GB and it can do this in a matter of seconds. But

to do so, it needs a lot of RAM memory, as it stores the contents of the documents. This is a big deal, because an app that does this is a bit heavy to run and, well, it may slow down your computer. Let's see all of this in details. Large Text File Viewer is a clean app, with a simple interface. The application window consists of 3 buttons: "Open File", "Search" and "Save". "Open File" button opens your file and "Search" button runs a search within the file. "Save" button opens the Save As dialog with your file name and extension selected, where you can then type a new name and press "OK". Opening large files is very easy and fast, especially if the files are a lot smaller than 1GB. The application is able to open a text file of size that exceeds 1GB. Just select the file you want to open, choose the "Open" button and press "Open". After the document has been opened, you are given the chance to rename it. The search feature makes sure to find a word or a phrase within the document. To run a search, simply select the "Search" button, enter a search string, and press "Search". The search will run as long as you keep the "Search" button selected. No matter how large the file, Large Text File Viewer will run a search in seconds. After the search has completed, it will show the found words. You can keep searching for other words, or even keep searching for the same word with more emphasis. Once you have found what you are looking for, just click on the file name or press "Return" to open the file. Large Text File Viewer can also save the file for further usage. Just select the file, choose the "Save As" button and enter a new file name and extension. Large Text File Viewer will save the file in its default location. This means that when you open this file in the future, the program will open in the same folder. The result is usually just what you are looking for. In the main window, you will find the content of the file, as if you had opened it with any other viewer. Large Text File Viewer will open large files in a matter of seconds and you will find your information as if you had opened the file with any other app. You also have the option to change the main window colours to suit your own tastes. Just select the color you want to change, click the "Change Colour" button and choose

System Requirements For Large Text File Viewer:
